

1. What are the most challenging aspect of the coursework task?

Talking about the topic was difficult for me because I had never learned it before, and I also did not have a good understanding of Python. So I looked it up on Google and discovered various resources to help me understand it better. I understood the concept, but not the question. As a result, I'll have to do even more research to find a solution. I tried some examples, but they didn't work. Overall, it was a fantastic challenge.

2. How did you go about completing the task?

To answer this question, I first look up concepts on Google from various websites, such as tutorials point, geeks for geeks, and so on. Then I watched some youtube videos. basically I watched a video from the channel "Apna College". Completing this gave me a concept of Caesar Cipher and a process to finish it. I tried examples from YouTubers and completed it with the help of some of my friends.

3. What have you learned over the course of completing this coursework task?

1. For the first time, I began researching topics slowly.
2. I used to depend on the teacher for any question and solution, but now I realize that I should do my own research first.
3. I didn't know much about Python syntax, for loops, and other conditions before this, but after finishing it, I realized how significant each element is.
